CARTAYNA GSX Level 2 CONFIGURATION FILES

KBOS - Boston Logan Airport– FlyTampa (FSX-P3Dv4).

is an international airport in the East Boston neighborhood of Boston, Massachusetts, United States. t covers 2,384 acres (965 ha), has six runways and four passenger terminals, and employs an estimated 16,000 people. It is the largest airport in both the Commonwealth of Massachusetts and the New England region in terms of passenger volume and cargo handling, as well as the 17th-busiest airport in the United States, with 36.3 million total passengers in 2016. Recently, with the advent of mid-sized long-range airliners such as the Boeing 787, as well as the growing New England economy, Logan has seen rapid growth in international traffic, with new routes as well as increased frequencies on existing routes. This has turned Boston Logan into one of America's fastest growing airports, especially for international traffic.

Boston Logan from FlyTampa is one of my favorite sceneries to fly in winter. The snow textures on the taxiways and all over the airport are really something, plus it has what is probably today the best Vatsim ATC and pilot community there is today (BVARTCC). Logan has the strongest presence of Jetblue Airlines, located on terminal C. I have taken the liberty of turning into glass and applying a touch of color on this terminal that I believe has a great result. The scenery had no docking, so were added. The Afcad however places the planes on wrong starting point, and this could be improved by the developers; for this issue I have adapted the stop position to fit the correct one & the docking's now adapt to this. I have tried to the best of my knowledge to place logos of the corresponding airlines on the jetways of the correct terminal. Be aware of the frames impact this scenery has on your pc, although is worth it. For some reason, this GSX configuration works only (at least in my case) if you do a Restart Couatl and Rebuild Airport Cache when entering the scenery. There are 3 fixed jetways for A380 on E10,11 & 12 that I don't give you jet the instructions on how to remove them since we don't have high enough jetways to reach this position. I have requested them to FSDT. The moment they get released, I will upgrade this scenery to category v3-NF. 12 Double Jetways were added where they seem to fit nicely.

- ✓ *Added docking devices on all parking's (on stands that can have one, that is most of them).*
- ✓ *Pushbacks checked for all parking's. Facing N,S, etc. added on each pushback. We now leave also information on whether you have Nose Right (NR) & (NL) for the less experienced pilots!*
- ✓ *All ground vehicles placed in the correct places.*
- ✓ *Stop positions corrected.*
- ✓ *68 parking, 71 single jetways, 12 Double jetways.*

HOW TO INSTALL:

FIRST: Drop the folder "*VIRTUALI*" that is within the "Roaming" folder here attached and drop it in the folder named *ROAMING* in your *APPDATA* folder (to find this folder, type %appdata% on your explorer).

SECOND: Drop the folder here attached called *"Fsdreamteam"* attached in your folder where you installed GSX, by defect would be *"Addon Manager"*.

THIRD: If you use the second step because you have not installed the Sode, then ignore this step In the FlyTampa Control Panel, select SODE Jetways. Go to the C:\ProgramData\12bPilot\SODE\xml folder and change the file extension of "*FlyTampa_KBOS.xml*" to ".off"

IMPORTANT NOTICE: *Make sure there is ONLY ONE file in your C:\Users\YOU\AppData\Roaming\Virtuali\GSX that starts with BKOS and that this one is the uuww-cartayna-v3 file or the one you have imported with this doc.*

Make sure once you enter the simulator to go to the Add-on Menu > Coautl settings > Restart Coautl and rebuild airport cache. Sometimes, Is normal on the first time you install a new configuration, and if is a big one, even more so.
